Notes:

(1) The "9A Net" harvest also includes catch of "non-local" management/production units which are shown in the NonLocal column.

(2) The proportion of "natural" coho in these fisheries was estimated separately, through cohort reconstruction, therefore it is not in agreement with Puget Sound run reconstruction figures, published elsewhere.

(3) These management units also contain naturally reared coho, which were estimated separately and then "aggregated" for modeling and management purposes, because of their secondary classification.
